

Finals Task 3. Using Time Intelligence Function

Description:

This laboratory session centered around the practical application of Data Analysis Expressions (DAX) Time Intelligence functions within Power BI to evaluate sales performance across different time periods. Participants learned how to develop key measures, including Year-to-Date (YTD) sales, which enable the tracking of cumulative sales figures throughout the year.

The exercise also involved utilizing variables within DAX formulas to construct a Year-over-Year (YoY) Growth metric, facilitating a comparison of sales performance between current and previous periods. These analytical tools provided valuable insights into sales trends, enabling users to identify patterns and growth trajectories more effectively.

Through this process, participants gained a deeper understanding of how DAX functions can be leveraged for time-based analysis, improving their skills in creating dynamic reports and dashboards. Ultimately, the session enhanced their ability to interpret sales data and present meaningful, actionable insights using Power BI's robust reporting capabilities.

The screenshot displays the Microsoft Power BI Desktop interface. The main area shows a data table with columns for Year, Avg Price, Median Price, Min Price, Max Price, Orders, Order Lines, Sum of Sales, Sales YTD, and Sales YoY Growth. The table is filtered by Year, showing data for FY2018 and FY2019. The Sales YTD and Sales YoY Growth columns are calculated using DAX time intelligence functions. The right-hand pane shows the Visualizations pane with a table visual selected, and the Fields pane with the Sales YTD and Sales YoY Growth measures added to the table. The bottom status bar shows the page number (Page 2 of 3) and the current date and time (11:04 am, 06/05/2024).

Year	Avg Price	Median Price	Min Price	Max Price	Orders	Order Lines	Sum of Sales	Sales YTD	Sales YoY Growth
FY2018	\$748.68	\$419.46	\$4.75	\$2,146.96	739	8,459	\$16,429,043	\$16,429,042.6
